Bill of Material

Optipro Enterprise is a Powerful, Flexible and Integrated ERP software for Discrete Manufacturing organizations. It helps a company to realize its true profit potential by providing timely direction and control to its manufacturing operations. Created keeping with the principles of true integration of the manufacturing and financial, Optipro Enterprise ensures the manufacturing, marketing and financial decision makers work from the same up-to-date information. In the executive suite or on the factory floor, everyone works together in the most time efficient manner to ensure the common end result: Maximum profit.

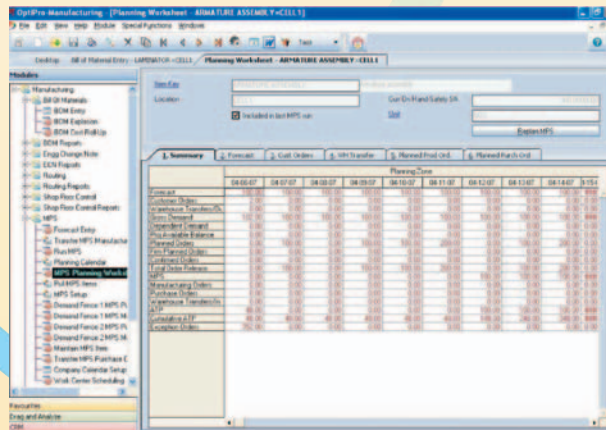

Optipro Enterprise is scalable enough to give any company, whether a small business or a member of the Fortune 500, the tools it needs to compete successfully in the marketplace and to maximize profit.

BILL OF MATERIAL

Optipro Enterprise's Bill-of-Material module maintains all part master and Bill of Material information. Using Optipro Enterprise, you can explode a Bill of Material down through all levels, producing both single level and indented multi-level bills. The Bill of Material module also provides "Where-used" information for any component part, and bottom-up costing which automatically generates standard costs for the assemblies.

ENGINEERING CHANGE NOTICE

Optipro Enterprise's ECN module provides you complete control of your engineering planning, processing, and documentation of change orders. It fully supports control of BOMs, including activations, deactivations, and replacement capabilities. Working together, the BOM and ECN modules give your company a complete and robust control of the engineering process.

MPS Planning Work Sheet

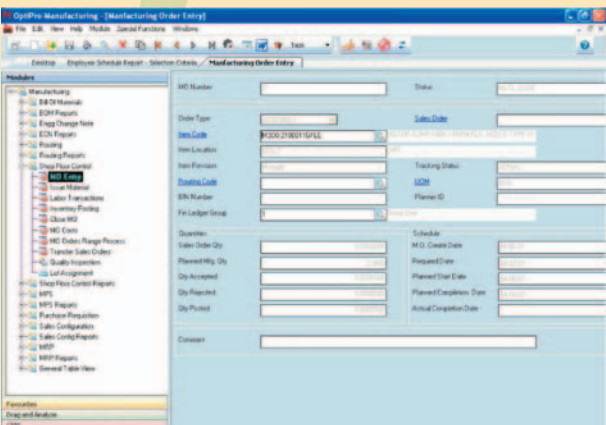

MASTER PRODUCTION SCHEDULING AND MATERIAL REQUIREMENTS PLANNING

Optipro Enterprise is designed to give management greater control over inventory levels and production costs through MPS and MRP modules. MPS helps in planning production orders based on forecast, demand and the capacity. Whereas, MRP helps in auto generation of purchase orders at the right time.

SHOP FLOOR CONTROL

The Shop Floor Control feature provides up-to-date information for production control personnel. The system is designed to give current status of all work orders. You can, for example, receive current status information for work order location, due date, priority, time remaining, work center load, labor, and machine efficiency. Shop Floor Control consists of Dispatching, Work Order Tracking, and Labor Reporting.

Optipro Enterprise's Shop Floor Control works in sync with both the Work Centers and Routing module to provide routing maintenance.

Shop Floor Control

QUALITY CONTROL

Optipro Enterprise's Quality Control feature is an integral part of the software, recording test values of items during receipt, in-store QC, In-process (production) QC and QC during dispatch. Your Quality Department can set any number of standards, tests, descriptors, and failure codes to inspected items. A powerful feature of this QC offering is the ability to record, track, and store any given item's quality history.

INTEGRATED FINANCIALS

Optipro Enterprise's Financial Integration automatically captures accounting information from the Sales, Purchase, Inventory and Manufacturing modules. This integration of the manufacturing and financial subsystems drastically reduces the need for manual input and reporting of the financial data. Optipro Enterprise integrates seamlessly with **Sage ACCPAC**.

DRAG AND ANALYZE

Make better enterprise decision based on actual data and not on intuitions, with Drag and analyze. Relish the use of mouse to simply drag and drop, to get the desired reports to the desired deep level. With this futuristic tool, identify trends and weaknesses and discover opportunities so that right actions can be taken on them at the right time.

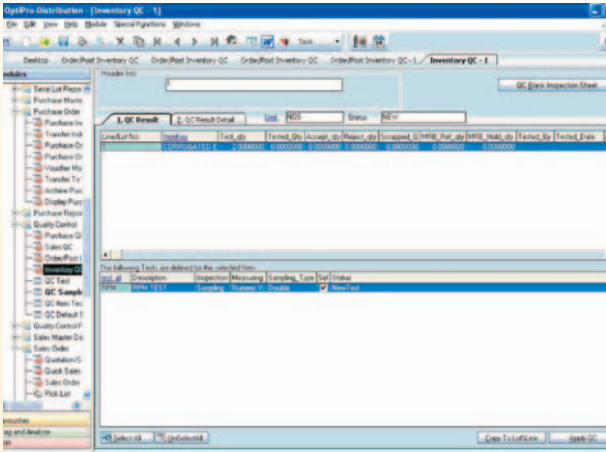

CRM

Optipro's CRM module is Software based customer centric approach that allows business to focus on their most valuable assets - their customers. Maintain 360 degree information of your interaction with customer with the help of our Sales opportunities, Service Charge and Internal Email modules. Create opportunity for a customer or prospect as soon as you receive a call from them. Mark the progress of the Opportunity at each step until it is won or lost. Simultaneously maintain all the reasons for which the opportunity was lost or gain along with the strategies your competitor followed so that its reference can be taken in future. Details like Clients problems, solutions recommended, actions performed, expenses included etc can be tracked through Services.

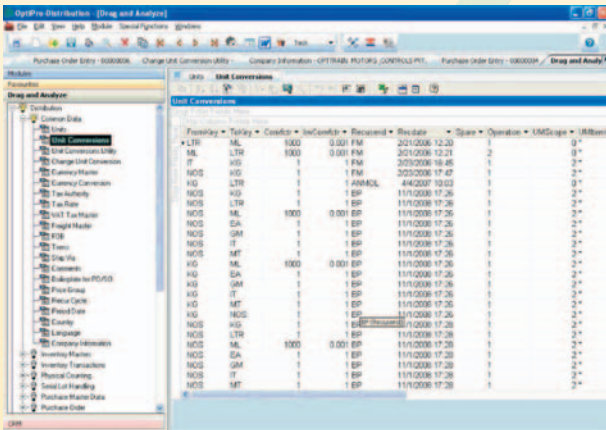

With TO-DO, conveniently organize tasks, calls, activities and easily tie them with users and Optipro screens. Create Jobs and Sub-jobs and link them to users. Within fraction of time, attach documents containing information or instructions or send mails to the concerned users using FYI.

POWERFUL USER INTERFACE

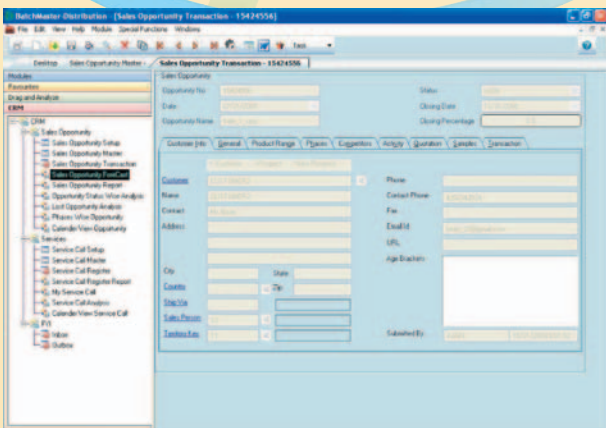

Optipro Enterprise has a whole lot work space to play on! Brighten up the system with the colors you love, easily change the company you are working on without logging off, work together on multiple instances of a screen and easily navigate between them. If you still want more, switch easily between screens of Distribution and Manufacturing, drill downs are loaded in abundance, find mandatory fields highlighted in yellow so you never forget maintaining them. Enjoy using and playing with Optipro Enterprise!
